RESULTS:
Based upon the radiograph submitted, the consensus was that no evidence of hip dysplasia was recognized. The hip joint conformation was evaluated as:

EXCELLENT

Based on the samples submitted, no evidence of Sebaceous Adenitis (SA) was found and the dog is phenotypically normal at this time. Normal results do not imply that the dog is genetically normal, only that there was no evidence of SA in the samples at this point in time. Retesting is recommended every one to two years for dogs used for breeding.

College of Veterinary Medicine

Owner Information
Owner: Cynthia Huff
Address: 2294 E 2250 N Rd
City-St-Zip: Carlock, IL 61725

Dog Information
Call Name: Mark
Breed: Poodle (Standard)
Registered Name: Jovet Second 2 None
Reg Number: PR10448801
Sex: male
Birthdate: 2/1/2007

AMGL Case #: 55187
DNA Source: whole blood
Testing Date: 2/18/2008
Test Run: NE – neonatal encephalopathy
Result: Normal

Explanation of results:
NORMAL: This dog has tested clear for the mutation causing NE in this breed. It can only transmit a normal gene to offspring, and can be bred to a dog with any test result without producing affected offspring.

CARRIER: This dog has tested as a carrier for the mutation causing NE in this breed. It will not develop the disease, but it may transmit either a normal gene or an affected gene to offspring. To avoid producing affected offspring this dog should only be bred to dogs DNA-tested NORMAL for this mutation.

AFFlicted: This dog has tested as affected for the mutation causing NE in this breed. It will show symptoms of the disease early and this disease is fatal by about 5-6 weeks of age. Please contact us for further information.
